Hi David and Matt,

I've attached an excel spreadsheet and an old ms access database file. They should have the same info but the spreadsheet is barebones and no metadata. the MS Access DB file should have metadata and data sources such but without some work I can't read it right now :).

I've also included a spreadsheet of just the cal academy of sciences herbarium sheet data. I don't see the Berkeley data. But it should all be in the database I hope.

So some overlap. But better safe than sorry. Let me know if anything is confusing.

Best,

Dylan

This is great, thanks! Not sure I'll get it all integrated before the ESA abstract is due, but that's ok. By the way, did you have a chance to look at that? I'll update the results by tomorrow afternoon, but I'm interested to know whether you'd like to have your name on it or not.

Jens
